R135 Hoist Drum Rotation Indicator

Junction Box

Indicator Feeler

Rotation Sensor

The R135 is designed to inform the operator of precise hoist drum rotation. The system has a wheel that rotates as the drum moves. The wheel is designed to mount on the hoist lever where the operator can feel the rotation. The system uses an electronic signal to transmit from the winch to the output wheel on the control lever.

Why choose a Wylie R135 System?

A proven product history no one can match.
Wylie's been building crane indicators since 1933!

Fits most cranes.

Easy to install and operate.

Improves the operators safety and efficiency.
